17 State House Station

Augusta, Maine 04333

RE: Update to Phase I Environmental Site Assessment
American Tissue Mill
Augusta, Maine

Dear Ms. Firth:

The purpose of this letter is to provide an update, to the Phase I Environmental Site Assessment (ESA) previously completed by MACTEC Engineering and Consulting, Inc. (MACTEC) for the American Tissue Mill in Augusta, Maine (the Site) dated June 2008. As established by ASTM Standard E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, the MACTEC Phase I ESA only remained valid for 180 days following the report date (through December 2008); therefore, an update was requested by the Maine Department of Environmental Protection (MEDEP). This Phase I ESA update was completed by Mr. John Cressey, an Environmental Professional as defined in §312.10 of 40 CFR 312.

To complete this update, Summit conducted:

- A new database search (First Search) to determine if new recognized environmental conditions (RECs) are present at the Site including additional releases of oil and/or hazardous materials (OHM) at the Site or in the vicinity of the Site;
- A Site visit to determine if conditions had changed since June 2008;
- An interview with City of Augusta and MEDEP officials familiar with the Site to determine if they were aware of changes in Site conditions; and
- A records review of MEDEP and City of Augusta files to determine if additional information had been discovered since June 2008.

Changes to the original ESA report that were identified during the supplemental records review, the Site visit, and/or provided by interviews are summarized below. These changes are referenced by the affected report section:

4.1 Standard Environmental Records Sources

Summit obtained radius searches of the federal and state environmental regulatory databases in accordance with ASTM E 1527-05 standards. The database search did not indicate any releases of OHM as having occurred on, or in the immediate vicinity of, the Site since June 2008. See Attachment A for a copy of the current database search.

American Tissue Mill
Phase I ESA Update
Page 2 of 3

4.4 Additional Environmental Record Sources

The following additional reports and memoranda were prepared subsequent to the original MACTEC ESA (June 2008):

Final Report - Asbestos Demolition Impact Survey for the Former American Tissue Mill Complex Located in Augusta, Maine – Summit Environmental Consultants, Inc., October 11, 2008

At the request of the MEDEP, Summit completed an asbestos demolition impact survey for the Site. The demolition survey included the on-site buildings for both friable and non-friable asbestos containing materials (ACM). In addition, Summit quantified observed Universal Waste materials.

Wastewater Memorandum – Summit Environmental Consultants, Inc., December 1, 2008

Summit sampled water within the on-site wastewater treatment plant on October 10, 2008 at the request of the MEDEP. Sampling was conducted to determine if the water met disposal guidelines for either the Greater Augusta Sanitary District or direct discharge to the Kennebec River. According to Mr. Jim Crowley of the MEDEP, the water is currently not acceptable for direct release to the Kennebec River due to slightly elevated levels of Total Suspended Solids (TSS) and Biological Oxygen Demand (BOD). Mr. Crowley recommended resampling in Spring 2009 prior to formation of the anticipated algae bloom. Based on the results of this follow-up sampling, the water will either be directly discharged to the river or required to be filtering prior to release to the river. A copy of this memorandum is attached to this letter as Attachment B.

Memorandum – Weston Solutions, December 15, 2008

Weston Solutions (Weston), on behalf of USEPA, oversaw completion of an emergency removal action during the period October 12, 2008 to December 3, 2008. During this emergency removal action, the USEPA response contractor removed chemicals from within piping and tanks at the Site. Chemicals removed included ammonia hydroxide, alum, lime slurry, wet resin, bleach liquor, sodium hypochlorite, and IGE PAL 660 (a biodegradable nonionic surfactant used for pulping paper). Although the majority of chemicals were removed, some residual amounts of these chemicals may still be present within piping and vessels. At the conclusion of the on-site removal action, the response contractor used spray paint to color-code pipes those pipes suspected to contain residual chemicals. Weston subsequently prepared a memorandum summarizing the removal action and the color-coding procedure. A copy of this memorandum is attached to this letter as Attachment C.

Project Manual for Demolition of the Former American Tissue Mill, Augusta, Maine – Summit Environmental Consultants, Inc., January 9, 2009

Summit, at the request of the City of Augusta, prepared a Project Manual for the demolition of mill buildings. The manual contained requirements for the proper handling and disposal of hazardous materials, asbestos, wastewater and sludge, as well as general construction requirements such as erosion and sediment control and site restoration. The manual provided the basis for the City to obtain bids from demolition contractors to demolish the mill to ground level.

American Tissue Mill
Phase I ESA Update
Page 3 of 3

Pollution Report #4, American Tissue Mills of Maine, 54 Maple Street, Augusta, Maine – USEPA, February 18, 2009

This memorandum, produced by the USEPA, detailed the activities conducted during the October 12 to December 3, 2008 removal action such as removal of PCB containing oil, evaluation of piping, and removal of alum from within a tank. See Attachment D for this memorandum.

5.0 Site Reconnaissance

Summit conducted a site reconnaissance on March 24, 2009 to determine if conditions had changed since June 2008. Due to snow and ice cover, visual observations of ground surfaces and within the wastewater treatment plant were limited. Site conditions appeared similar to conditions documented in photographs included in the original ESA; however, evidence of significant vandalism (i.e., copper theft) was observed. In the Boiler House, the cutting out of copper resulted in spills of small quantities of No. 6 fuel oil. In addition, accumulation of snow and ice was present in several buildings due to leaking roofs.

6.4 Interview with Local Government Officials

Summit interviewed Mr. Mike Duguay, City of Augusta Economic Development Director, on March 25, 2008, regarding changes to the property since June 2008. He was not aware of any changes to the property with respect to environmental issues.

6.5 Interview with State Officials

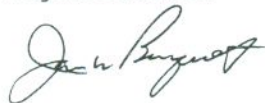

Summit interviewed Ms. Kara Walker of the MEDEP to determine if any spills either at or in the vicinity of the Site were reported to the MEDEP since June 2008. Based upon MEDEP records and her research, Ms. Walker was unaware of any reported releases within 0.5 miles of the Site since June 2008.

The remaining sections of the Phase I ESA Report completed by MACTEC for the Site and dated June 2008 are unchanged. Please contact us if you have any questions regarding this letter.

Sincerely,
SUMMIT ENVIRONMENTAL CONSULTANTS, INC.

John K. Cressey
Project Scientist

James W. Bouquet, P.E.
Principal Engineer

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to FirstSearch Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in FirstSearch Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although FirstSearch Technology Corp. uses its best efforts to research the actual location of each site, FirstSearch Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of FirstSearch Technology Corp.'s services proceeding are signifying an understanding of FirstSearch Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

pre-cerclis screening	State, Fund Financed		02-04-2004
combined preliminary assessment/site inspection Low priority for further assessment	State, Fund Financed		02-01-2008
discovery	State, Fund Financed		02-05-2004

DESCRIPTION:

The site area surrounds the historic Fort Western and it is currently owned by the City of Augusta. The area of concern surrounds the Fort directly to the east, west, and north of the Fort, where a gas/service station, machine shop, shoe, and papertube manufacturer where located. The area of concern is currently a lawn and a parking lot for Augusta s City Hall.

RE: Wastewater – Former American Tissue Mill

Jane,

On October 31, 2008 you and I had a conversation regarding the sampling parameters needed by the Greater Augusta Sanitary District for acceptance of the wastewater currently on-site within the Former American Tissue Mill's clarifiers. Samples were collected by Summit on November 5, 2008. The parameters analyzed, at your request were, the thirteen priority pollutant metals (with mercury by Method 1631) and cyanide. The mercury sample was collected following "clean room mercury" protocols and all samples submitted to Maine Environmental Laboratory (MEL) on November 5, 2008.

In addition, Summit contacted Mr. James Crowley of the Maine Department of Environmental Protection (MEDEP) to inquire into the possibility of discharging directly to the Kennebec River. Mr. Crowley asked that in addition to the samples Ms. Carroll had requested, that additional samples for alkalinity, biological oxygen demand (BOD), and total suspended solids (TSS) be analyzed. A field pH was also performed and the result was 6.8 standard units (su).

Please feel free to contact me with any questions regarding the attached analytical results.

Report Date: November 26, 2008

Report No.: SME739-08

Enclosed are the results of the analyses requested on your samples as received by the laboratory. Samples were received in acceptable condition and analyzed within method holding times with all quality control data within laboratory acceptance limits unless noted. Reporting detection limits are the minimum levels for reporting quantitative data. These limits are 3.18 times the method detection limit as defined in CFR 40 Part 136, Appendix B. Data reported between the reporting and method detection limits are J flagged as estimated. Maine Environmental Laboratory is certified by Maine, Massachusetts, New Hampshire and NELAP (cert.#2031). A list of certified parameters is available on request. The results reported herein conform to the most current NELAP standards, where applicable, unless otherwise narrated in the body of the report. This report shall not be reproduced, except in full, without the written consent of the laboratory.

The complete report consists of the following sections:

DATE: 15 December 2008

RE: Color Coding and Location of Pipe Piles at the American Tissue Mills of Maine Site, 54 Maple Street, Augusta, Kennebec County, Maine. TDD No. 06-10-0001; Task No. 0248; Document Control No. R-5241.

INTRODUCTION

This Memorandum summarizes the spray paint color coding used on various chemical lines and piping, the location of pipes left in place due to unsafe access or residue coating only, and the staging areas for removed pipe.

Chemical Line	Color
Lime Slurry	Green
Alum	Pink
Wet Resin	Blue
Kymene	Purple
Sodium Hypochlorite	Orange
Bleach Liquor	Orange
Sodium Hydroxide	Red

REMAINING CHEMICAL LINE LOCATIONS

Chemical Line	Pipe Type	Location
Ammonia Hydroxide	Steel (4 Inch)	In Wastewater Treatment Plant Pond closest to the Control Building.
Lime Slurry	Steel	Building 13 and northwest wall of Building 14A.
Wet Resin	PVC	Southeastern wall of Building 14 and Northeastern wall of Building 14A.
ALUM	PVC (2 Inch)	Elevated height from 5,000-gallon Alum tank to Alum tank in the middle of Building 14A.

Chemical Line	Pipe Type	Location
ALUM	PVC	Southwest corner of Building 14A. The line is cut at ground level and plugged and appears to run underground to Building 6.
Bleach Liquor	PVC (4 Inch)	First Floor of Building 6 eastern wall to the basement of building 6 Concrete tank on the southwestern side.
Bleach Liquor/Sodium Hypochlorite	PVC (4 Inch)	Underneath the steam pipes parallel to the railroad tracks outside of Building 7.
Sodium Hypochlorite	PVC (2 Inch)	Basement of Building 6 from the ground level of Building 3. Ground level of Building 3 near the stairs on the north end of the Building.
IGE PAL 660	Steel	Southeast corner of Building 3 near Sodium Hydroxide Tank. The line contains material.

PVC = Polyvinyl Chloride

PIPE STAGING AREAS

Building 13: Sodium Hypochlorite PVC pipe, and Lime Slurry Steel pipe elbow. (See Photograph 1).

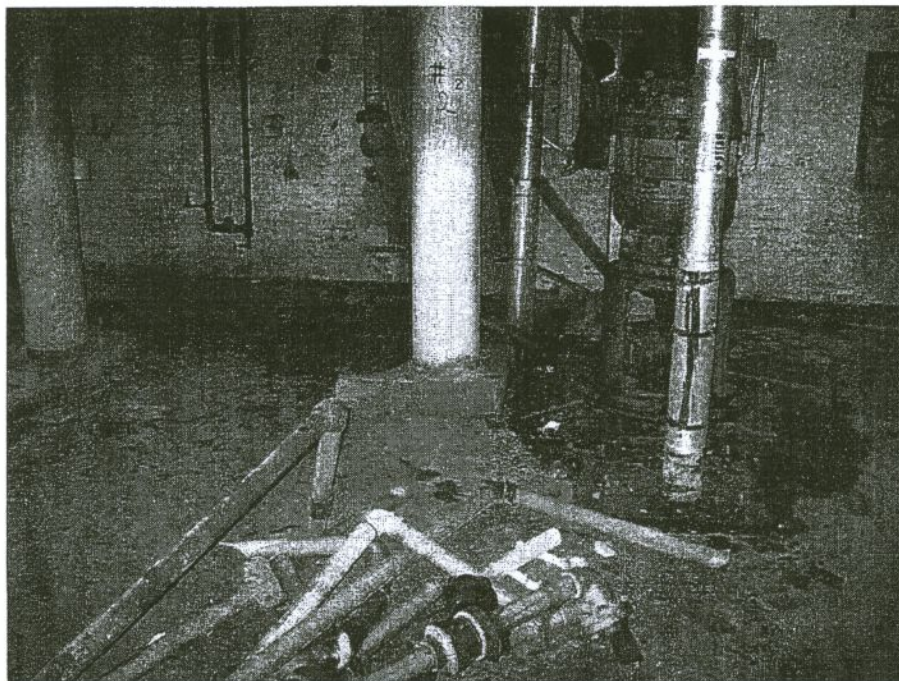

Building 14A: Wet Resin, Sodium Hypochlorite, and Bleach Liquor PVC pipes were staged near the Lime Slurry and Alum Tanks. (See Photograph 2).

Building 7: Wet Resin, Sodium Hypochlorite, Bleach Liquor, and Kymene Steel pipes and PVC pipes were staged in a garage door bay at ground level. (See Photograph 3).

Building 7: Kymene PVC pipe was staged near the Kymene tanks on the first floor. (See Photograph 4).

Building 3: Wet Resin PVC pipe was staged near the ramp on the first floor.

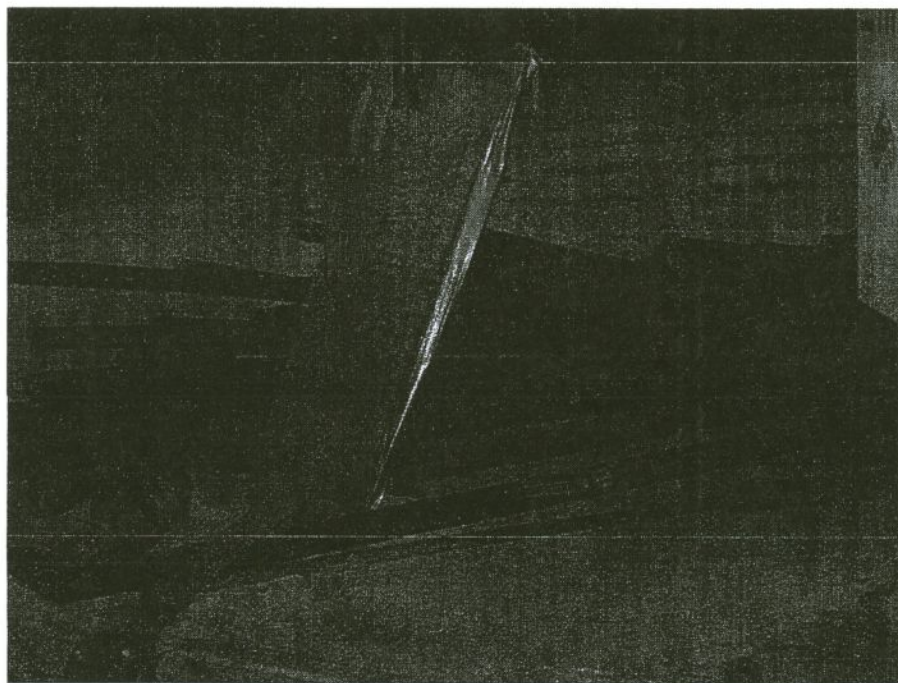

Building 3: Sodium Hypochlorite and Bleach Liquor PVC pipe and manifolds were staged on the ground floor near the storage tanks. (See Photograph 5).

SCENE: Photograph 1: Sodium Hypochlorite PVC pipe staged in Building 13.

RCRIS ID #:		Contract #	68-W-03-037

Site Description

The American Tissue Mills of Maine (ATM) Site is the former location of a tissue paper mill, which, prior to 2001 was operated by American Tissue Mills of Maine. In 2001, the company declared chapter 11 bankruptcy, and ceased operation of the mill. The mill was acquired by Augusta Tissue LLC in March 2003. Augusta Tissue LLC has not resumed operation of the mill. The facility has been unsecured and unheated since operations ceased in 2001. Most of the facility has been without electrical power since that time. Two former employees of American Tissue had been retained in a part-time capacity by Augusta Tissue. One of the responsibilities of these employees was to maintain a series of propane fueled heaters to keep the chemicals in the drums, totes, tanks and piping from freezing during winter. At one point during the winter of 2005/2006, the propane supply at the site ran out. ATM did not provide their employees with any funds to procure additional fuel, and the facility has been unheated since that time. Reportedly, the employees have not been paid for their services for several months. Electrical service was maintained in the office portion of the complex, until a fire destroyed the office on May 15, 2006.

Current Activities

Please refer to earlier POLREPS for a description of Site activities prior to October 12, 2008.

On October 12, 2008, EPA and its contractors remobilized to the site, and from that date through December 3, 2008 performed the following site activities.

- Several small capacitors containing PCB contaminated oil were packaged and shipped off site for disposal. In addition, PCB contaminated oil was drained from one large transformer and shipped off site for disposal.
- A thorough evaluation of piping, which had been used to transfer chemicals while the facility was operating, was conducted. Piping which contained hazardous chemicals, and posed a threat of release was identified. The chemicals were removed (including removal of the piping, where necessary), packaged and shipped off-site for disposal.
- During removal operations, a tank containing alum slurry, and a vault containing lime slurry were identified. The contents of these containers were removed and shipped off-site for disposal.

On December 3, 2008 the last waste streams were shipped off site for disposal, completing the removal action.

Key Issues

The removal action at this site was initially determined to be complete as of August 30, 2007 (see POLREP 3 and Final).

Subsequent actions documented in this POLREP, were conducted in accordance with the Action Memorandum authorizing an exemption from the 12 month statutory limit, approved on September 8, 2008.

Estimated Costs *

	Budgeted	Total To Date	Remaining	% Remaining
Extramural Costs				
ERRS - Cleanup Contractor	\$1,000,000.00	\$625,000.00	\$375,000.00	37.50%
RST/START	\$250,000.00	\$112,600.00	\$137,400.00	54.96%
Intramural Costs				
USEPA - Direct (Region, HQ)	\$200,000.00	\$60,000.00	\$140,000.00	70.00%
Total Site Costs	\$1,450,000.00	\$797,600.00	\$652,400.00	44.99%

* The above accounting of expenditures is an estimate based on figures known to the OSC at the time this report was written. The OSC does not necessarily receive specific figures on final payments made to any contractor(s). Other financial data which the OSC must rely upon may not be entirely up-to-date. The cost accounting provided in this report does not necessarily represent an exact monetary figure which the government may include in any claim for cost recovery.

Disposition of Wastes

Please refer to earlier POLREPS for a disposition of waste information prior to October 12, 2008.

Waste Stream	Quantity	Manifest #	Disposal Facility
Polychlorinated Biphenyls, Liquid	136 Kg.	00229818	Clean Harbors of Braintree, Inc. 1. Hill Avenue Braintree, MA 02184
